

FIX Connectivity

Efficient and fast trade execution

The FIX Gateway allows you to establish a direct connection for trade execution with your Portfolio Management System (PMS) provider and Bank Julius Baer trading platform. It allows you to execute your orders directly with Bank Julius Baer in real time and without any manual effort.

The FIX interface enables you to directly place trading orders via your own PMS provider to our Julius Baer trading platform.

Through FIX, you can trade ISIN based securities with both single and block orders, as well as execute FX trades, depending on your PMS provider.

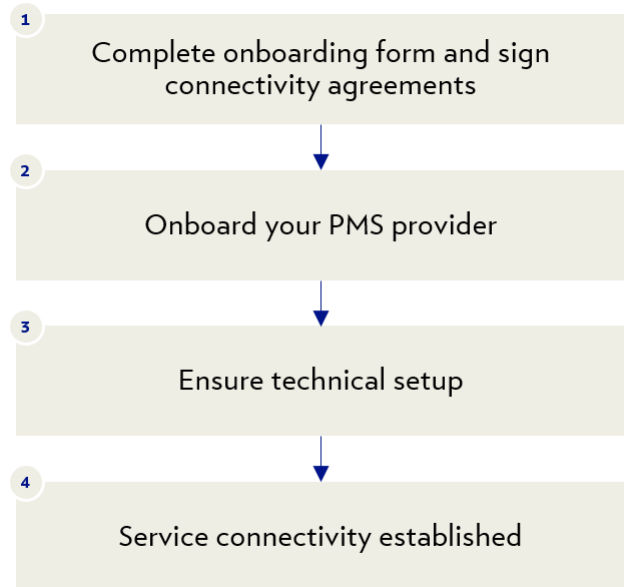

It seamlessly routes orders into Julius Baer's trading system for efficient and fast execution which allows for quick access to markets and direct connections to exchanges and brokers.

FIX Connectivity is a fully scalable solution that allows for large volumes and numbers of transactions at a time.

In a nutshell

"The FIX Protocol is a language comprised of a series of messaging specifications used in trade communications. It connects the global ecosystem of asset managers, banks/brokers, vendors, and regulators by standardizing the communication among participants" (FIX Trading Community, 2022).
